Detailed Action

The following communication is in response to telephone interviews held on 5/6/09. Examiner notes a terminal disclaimer was filed on 2/26/2009, in regard to patent 7,454,382.

Status of Claims

Claims 2, 4-6, 8-13, and 20-23 are original. Claims 1, 3, 14-17, and 24-25 are currently amended. Claims 7, 18-19, and 26 are cancelled. Claims 1-6, 8-17, and 20-25 are currently pending.

Allowable Subject Matter

Claims 1-6, 8-17, and 20-25 are allowed, subject to an examiner's amendment described bellow.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Monika Dudek on 5/6/2009.

THE APPLICATION HAS BEEN AMENDED AS DETAILED IN FOLLOWING PAGES:

Claim 1.

A method for sending an order to an electronic exchange, the method comprising:

Art Unit: 3693

receiving, via a computer device, a command representing an order request that comprises an order to buy or sell a quantity of a tradeable object at a particular price;

temporarily holding the order request in a memory unit such that the order request is not sent to a matching engine at the electronic exchange until a preset rate of trades occurring at one or more prices to buy or sell the tradeable object is detected, wherein the preset rate of trades is based on an order quantity traded at the one or more prices;

receiving, via a computing device, market data comprising quantity and price information relating to the tradeable object being traded at the electronic exchange;

using the market data to determine, via a computing device a rate of trades occurring at one or more prices to buy or sell the tradeable object at the electronic exchange;

comparing, via a computing device, the rate of trades to a preset rate of trades; and

automatically releasing the order request to the matching engine at the electronic exchange upon detecting the preset rate of trades.

Claim 17

A method for sending an order to an electronic exchange, the method comprising:

receiving, via a computer device, a command representing an order request that comprises an order to buy or sell a quantity of a tradeable object at a particular price;

refraining from sending the order request to a matching engine at the electronic

Art Unit: 3693

exchange until a preset rate of trades occurring at one or more prices to buy or sell the tradeable object is detected, wherein the preset rate of trades is based on an order quantity traded at the one or more prices;

receiving, via a computing device, market data comprising quantity and price information relating to the tradeable object being traded at the electronic exchange;

using the market data to determine, via a computing device a rate of trades occurring at one or more prices to buy or sell the tradeable object at the electronic exchange;

comparing, via a computing device, the rate of trades to a preset rate of trades;
and

automatically forwarding the order request to the matching engine at the electronic exchange upon detecting the preset rate of trades.

Claim 25

A method for sending an order to an electronic exchange, the method comprising:

receiving, via a computer device, a command representing an order request that comprises an order to buy or sell a quantity of a tradeable object at a particular price;

displaying at a user terminal a first type of indicator representing the order request;

refraining from sending the order request to a matching engine at the electronic exchange until a preset rate of trades occurring at one or more prices to buy or sell the tradeable object is detected, wherein the preset rate of trades is based on an order

Art Unit: 3693

quantity traded at the one or more prices;

receiving, via a computing device, market data comprising quantity and price information relating to the tradeable object being traded at the electronic exchange;

using the market data to determine, via a computing device a rate of trades occurring at one or more prices to buy or sell the tradeable object at the electronic exchange;

comparing, via a computing device, the rate of trades to a preset rate of trades; and

forwarding the order request to the matching engine at the electronic exchange upon detecting the preset rate of trades.

Displaying at a user terminal a second type of indicator representing an order request, wherein the first type of indicator represents the order request at a first time which represents a time before the event is detected and the second type of indicator represents the order request at a second time which represents a time after the event is detected.

Reasons for Allowance

The closest prior art that the examiner has been able to locate is Waelbroeck et al, U.S. PG-Pub 2002/0052827. Waelbrook provides methods for inquiring about the size of an order a previous buyer purchased at a specific price point. The method, given in Waelbrook, established a price and a quantity of a security that a user would like to sell. The method then went out into a market and found the last buyer of the security at

Art Unit: 3693

the given price and compared the quantity the user purchased. If the quantity the last buyer purchased was not close the one intended to be sold by the user, the system would check the next buyer. The method would only execute an order when the quantity the user wanted to sell and the quantity the buyer wanted to purchase were close.

While Waelbrook is similar to the instant application in many aspects, there are clear patentable distinctions. Initially, Waelbrook does not teach comparing the rate of trades to a preset rate of trades, nor does Waelbrook teach releasing the order request to the matching engine at the electronic exchange when the rate of trades exceeds the preset rate of trades. Waelbrook's method uses the quantity value of an order as a threshold value to search for a close match to the bidding quantity. In the present invention however, there is no concern over finding a matching order close in quantity, rather determining past trade volumes and if they are larger than the given preset rate of trades.

Secondly, Waelbrook does not directly compare a rate of trade value to a preset rate of trade. As stated above, Waelbrook compares an order rate of trade to past purchased rates of trade of an individual; while the present invention is concerned with overall rate of trade at a given price level.

The following is a formal statement of reasons for allowance:

Claims 1, 17, 24, and 25 are allowed because the best prior art of record, Waelbrook, alone or in combination, neither discloses nor fairly suggest the limitations,

Art Unit: 3693

in a method, and associated computer readable medium with instruction encoded thereon, for

sending an order to an electronic exchange, the method comprising:
receiving a command representing an order request that comprises an order to buy or sell a quantity of a tradeable object at a particular price;
temporarily holding the order request in a memory unit such that the order request is not sent to a matching engine at the electronic exchange;
receiving market data comprising quantity and price information relating to the tradeable object being traded at the electronic exchange; and
using the market data to determine a rate of trades at one or more prices occurring at the electronic exchange;
comparing the rate of trades to a preset rate of trades;
releasing the order request to the matching engine at the electronic exchange when the rate of trades exceeds the preset rate of trades; -
determining if at least a portion of the quantity of the order remains in an electronic order book at the electronic exchange for a preset time period; and
responsive to determining if said portion of the quantity remains in the electronic order book, sending a request to delete the remaining quantity of the order.
establishing an order quantity;

Claims 2-6, 8-16, and 20-23 are also allowable for the same reason discussed above, in that they are dependent on allowed Claims 1 and 39. As a final matter any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and; to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
